

## 1 Homework.out

Usage: ./Homework.out [-f File]

Program intended to output, then reverse and output, every line of a text file input.

File name may be followed by an optional time delay.

- Argument should be in the form of a number in seconds. Input may be an integer, or a decimal. E.G. `./Homework.out -f test.txt 5.5`  
- This will output, then reverse every line of test.txt. Each line will have a 5.5 second delay.

Uses only standard C libraries.
